Paper Gingerbread House Template

Print, cut, fold and glue a little paper gingerbread house. A craft for kids and classrooms, made of paper, so it is not for eating.

Paper: US Letter · **Print at Actual Size, not Fit to Page** · **Finished house:** about 3 in wide, 2 in deep, 3 in tall

HOW TO READ IT

- ——— solid line: cut
- - - - - - - - dashed line: fold
- gray tab: glue

Print on cardstock. Thin printer paper bends, and cardstock makes walls that stand up straight. Little kids will need a grown-up for the scissors.

HOW TO MAKE IT

1. **Cut** along the solid outside line. Keep the gray glue tabs attached.
2. **Crease** every dashed line. Run a ruler and a pen with no ink along it first for a sharp fold.
3. **Fold** on the dashed lines, printed side out, so the 4 walls stand up in a box.
4. **Glue** the 2 tabs on the far side wall inside the front and back walls. Then fold the roof down and glue its 4 tabs inside the pointed walls.
5. **Hold** each tab for about 30 seconds so the glue grabs. A glue stick or white school glue works.
