The 10 pieces

Roof and wall	2	p. 1, 2
Back triangle	1	p. 1
Front glass triangle	1	p. 2
Deck floor	1	p. 3
Step	1	p. 3
Front railing	2	p. 3
Side railing	2	p. 3

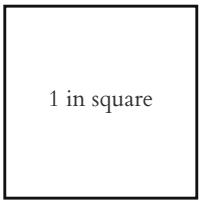

One number runs this house: 4.5 in. At 60 degrees the triangle has three equal sides, and the roof panel slope matches them. Check any piece against any other: they should agree.

Cut the window and the hatch out of the back triangle before baking. The hatch lets a battery tea light slide in after the house is built. Never a candle.

FRONT GLASS TRIANGLE · cut 1 · bottom edge on the board

Candy glass

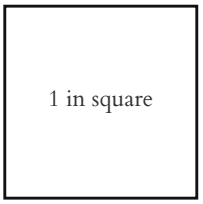

5 panes, red dashes: cut out before baking. The door bay is scored, not cut.

Bake 5 minutes short, fill each pane level with crushed clear or amber hard candy, then bake until it melts flat. Cool on the parchment before you lift it.

Glass: about 2.72 sq in, about 13 g of candy. Buy 4.

RAILINGS · cut 2 front, 2 side · score the balusters, no cut-outs

front railing 1.45 x 0.8

front railing 1.45 x 0.8

side 0.65

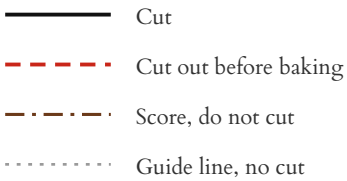

side 0.65

Build order

1. Back triangle up, propped with a can. One roof panel leans on it. Hold, then prop.
2. Front glass triangle up against the same panel, on its dotted line.
3. Second roof panel leans in to meet the first at the ridge. Wait 2 hours.
4. Thick bead of icing along the ridge to fill the V. Wait 2 hours more.
5. Deck floor slides under the overhang up to the glass. Railings on the deck edges, step in front.
6. Snow and candy after 4 hours. Move it the next day, by the board.

Finished house: about 4.93 in wide at the board, 5 in long under the roof, 4.02 in to the ridge.
With the deck it needs a board at least 7 by 8 in. All 10 pieces fit one batch of our house dough.
Side railings stop 0.1 in short of the roof edge, so the roof never rests on them.
