bottom edge

The stem

Six panels make the six-sided stem: 1 front, 4 window panels, 1 back.

Cut out the round windows for candy glass.

Mark the door with a toothpick. Do not cut it.

The ceiling plate

This flat hexagon sits on top of the six walls and carries the cap. It reaches about 1.08 inches past each wall, like the brim of a mushroom. The dotted inner hexagon shows where the walls sit. The dotted spokes are guides for piping the gills on the underside. Pipe them before the plate goes on.

The cap

Six triangles lean together into a low, wide cap over the plate. Glue them upside down in a mixing bowl lined with plastic wrap, at least 8 inches across and about 3 inches deep. Let it cure 6 hours.

The dotted circles are guides for the white spots. Add more spots across the seams once the cap is glued: they hide the joints.

The block is a small box with a square on top. Ice it yellow with a piped question mark. The coins make the path to the door.
